

**NAME**

cv - convert between metafile formats

**SYNOPSIS**

cv [ -r ][ file .. ]

**DESCRIPTION**

*Cv* reads each human readable metafile *file* in sequence and converts it to a binary form. If the option *-r* is specified, the reverse conversion is performed.

If no input files are specified, the standard input is read.

**EXAMPLE**

To convert the binary file meta.bin to its human-readable equivalent, and put the result in meta.human

```
cv -r meta.bin > meta.human
```
